

Blackmer® White Paper Offers Solutions to Challenges Found in Liquid Storage Terminals

Liquid storage terminals play an integral role in the ongoing success and relevance of a wide array of industries around the world. However, evolving product configurations, as well as a growing list of ancillary operations that terminal operators are now being asked to perform, can lead to “soft spots” in the liquid-handling systems that feed these terminals. To make

sure that terminal operators are not experiencing wastes of time, money and energy as they play their part in the supply chain, Blackmer®, Grand Rapids, MI, has created a white paper entitled “Coping With Change In Terminal Operations.”

Blackmer’s white paper points out the challenges associated with this changing terminal landscape and offers the best solution—its world-renowned sliding-vane pumping technology. Sliding-vane technology, which has been the accepted industry standard for more than 100 years, is perfect for terminal operations for a number of reasons, including:

- Less power consumption
- Less maintenance, repair and downtime
- Less wasted or contaminated product
- More speed and precision in loading and unloading
- More consistency in blending

All of these traits make Blackmer sliding vane pumps the most efficient solution for the growing challenges inherent in operating a liquid storage terminal in today’s ever-changing marketplace.
